INFORMATION DEVELOPMENT CO., LTD.

**INFORMATION DEVELOPMENT CO., LTD. Begins Offering
"Network Monitoring and Incident Response Service
NDR (Network Detection and Response)"**

INFORMATION DEVELOPMENT CO., LTD. (Headquarters: Chiyoda-ku, Tokyo, President and Representative Director: Toshio Yamakawa, hereafter the company) is will begin its offering of "Network Monitoring and Incident Response Service NDR (Network Detection and Response)" on July 10th, 2020.

■ **Service Offering Background**

In our experience proposing security solutions to our clients, we have found that many of them deal with the similar issues:

- "We don't have a security budget large enough to support a SOC (Security Operations Center)."
- "We want to strengthen security without taking on additional assets."
- "I feel uneasy managing and operating advanced security products."
- "I want to strengthen the security of our network as a whole, not just our endpoints."

We decided to create this service in response to these voices in order to provide advanced security measures at a reasonable price to our clients.

■ **What is the "Network Monitoring and Incident Response Service NDR (Network Detection and Response)"?**

The service monitors a client's network by analyzing their flow data on a monitoring server. All devices with IP addresses fall into the monitoring range. When an incident is detected, one of our security engineers will verify the facts and triage the alerts. We will then notify the client of the incident response or provide them a countermeasure/mitigation plan.

■ **Service Features**

(1) **Easy to Install**

Clients need only install a collection server in their network and direct the network flow data to this server.

Since the service is agentless, clients can easily begin using the service while continuing to make use of their existing security measures.

(2) Detects "Invisible Threats"

This service makes it possible to catch in real time conventionally difficult to detect threats such as zero-day malware infection, internal fraud/information leakage, and unauthorized logins.

(3) Only Notifies Clients about Alerts that Require Action

Thanks to our product's machine learning capabilities and the scrutiny of our security engineers, we will only notify you about alerts that truly require action. We can help you significantly reduce time lost on unnecessary alerts and we will never miss a critical incident.

■ **Pricing**

We propose a pricing plan that is most suited to the size of your firm.

Initial Cost		¥300,000~
Monthly Fee (Based on Number of Users)	100 Users	¥190,000~/Month
	200 Users	¥225,000~/Month
	300 Users	¥295,000~/Month
	500 Users	¥450,000~/Month

■ **About Information Development**

We at INFORMATION DEVELOPMENT CO., LTD. have been providing IT services such as system operation management and system development to clients in a wide range of industries like finance, public affairs, and aviation since our establishment 50 years ago.

In addition, we have also continued to solve our client's issues by combining our cyber security knowledge accumulated over 20 years with our many years of experience in operational management and system development. We, Information Development, will continue to contribute to the improvement our clients' IT environments.
